| V dohrávke 16. kola sme nastúpili proti družstvu Myjavy. V dnešnom stretnutí sme produkovali určite viac pozitívnych činností, ako tomu bolo v predošlom kole. Prvý polčas bol vyrovnaný, domáci mali veľkú príležitosť po nedorozumení našich brániacich hráčov, my sme mali zopár nedotiahnutých útočných akcií a rohových kopov. V druhom dejstve sme si s pribúdajúcim časom začali vypracovávať veľké príležitosti. Efektivita však bola nulová. V 60-tej minúte rozhodla pekná strela Spóda spoza pokutového územia. Zvýšiť mohli Pham a Šuplata. Pozitívami boli dôrazné a konštruktívne riešenia herných situácií našich hráčov v defenzíve a určité fázy, kde sme solídne kombinovali. |                       |                                                                                                                                            |             |                                          |          |                                                                                                                                                          |                                                                                                   |                                                                                         |         |                                            |  |  |  |                                                                                                   |                                                                                                |         |      |     |  |  |                                                                                                 |  |       |     |  |                                                                                                                                                                                                                                                                                                                             |  |      |  |  |      |     |         |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |                                                                                                                                                                                                                                                                                                                            |  |  |       |  |  |       |     |      |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
